

“Winter is approaching, be prepared.”

Let us help protect your vehicle with a coolant service including a coolant flush, cooling system inspection, belt & hose inspection.

Thermostats are designed to help maintain constant temperature in your running engine and are a maintenance item. A properly operating thermostat will also keep constant heat to your heater core for proper heater operation on those cold winter days. Let us help you get to your destination safely and warm with our winter cooling system service. If your thermostat is more than two years old, it is recommended for replacement.

Call us and schedule your appointment and bring in the following coupon when you bring in your vehicle.

\$10 Coupon good for any cooling system repair or service completed.

Coupon has no cash value and only redeemable at time of purchase. Coupon valid September through March.
